

Adapix Site Audit

Improvement recommendations for adapixai.com

Reviewed June 19, 2026

Messaging & Copy

Trust gaps that need answers fast:

- "AI · runs in your account" for Claude is confusing — does Adapix use Claude's API under the hood, or does the customer need their own Anthropic account? This is the kind of line a technical buyer will stumble on and never resolve, killing the sale silently.
- "Customer data stays on device" is a strong claim but unproven — no mention of encryption, SOC 2, HIPAA compliance (critical for the dental/chiropractic vertical being targeted), or what happens if the device is stolen.
- No explanation of what happens when the Pi dies, loses power, or the office WiFi drops. A \$799 single-point-of-failure box needs a stated fallback story.
- "First batch ships Q3" — Q3 of what year is implied but not stated; on a reservation page this ambiguity costs conversions.

Missing proof:

- Zero testimonials, case studies, logos, or "as seen in" — for a \$799+\$99/mo B2B purchase, social proof is usually the #1 conversion lever. Right now it's 100% claims, 0% evidence.
- No specific use-case walkthroughs by industry (dental vs. HVAC vs. real estate) — a vertical-specific landing flow would let each buyer immediately picture it in their workflow instead of generalizing from one demo.

Trust & Risk Reduction

- No money-back guarantee or trial period mentioned — "no contract, cancel anytime" covers the software, but the \$799 hardware is a sunk cost with no stated return policy.
- No security/compliance page or even a sentence on data encryption — for healthcare/legal verticals this is disqualifying, not just a nice-to-have.
- No FAQ section at all. Obvious unanswered questions: Does this work with Outlook? What if I have multiple staff/inboxes? Can I use my existing CRM? What if a message goes out wrong — am I liable?

Conversion Funnel

- The "Reserve" CTA collects an email but it's unclear what happens next — no stated timeline, no deposit/payment mentioned, no confirmation of what "you're on the list" actually secures.
- No live chat, demo booking, or sales contact path for businesses that want to talk to a human before committing — ironic for a product about better follow-up.
- Single CTA throughout ("Reserve") — no lower-commitment options like "Watch a 2-min demo" or "See sample messages" for people not ready to reserve yet.

Visual / UX Polish

- The product photo is just the brand mark (adapix_mark.svg) repeated — no actual photo of the physical device. For hardware, this is a big miss; people want to see the object they're buying.
- Dashboard mockup numbers (47 sent, 3 drafts, 12 booked, 1 flagged) are static and generic — a short looping animation or interactive demo would make the “every morning, a clear desk” promise tangible instead of told.
- No video anywhere — a 30-second product demo video showing the actual approve/edit flow would do more conversion work than any copy on the page.

Pricing Page Specifics

- \$99/mo is stated but doesn't say what's included at scale — is it one inbox/one number, or does it cover a whole team? Pricing tiers (solo vs. multi-location) are absent.
- No comparison to alternatives (a part-time admin, a generic chatbot tool, Calendly+reminders stack) to anchor why \$799+\$99/mo is a good deal.

SEO / Discoverability

- Meta description is decent but the page has no blog, no industry landing pages, and no schema markup visible — for a niche B2B hardware product, organic search through vertical-specific content (e.g. “AI follow-up for dental practices”) would be a major growth lever currently untapped.

Top 3 Fixes by ROI

#	Fix	Why It's High ROI
1	Add testimonials / case studies	Biggest trust lever for a brand-new, unproven product category
2	Add a real product photo + demo video	People don't buy hardware sight-unseen; the page currently shows the logo, not the device
3	Add an FAQ + security/compliance section	Removes silent objections (HIPAA, data security, liability) that kill B2B deals before they start

Bottom Line

The product story is strong and the differentiation (on-device, human-approved, plug-and-play) is clear. The gap is entirely in proof and risk reduction — testimonials, real photos, security details, and an FAQ would do more to convert visitors than any copy rewrite.
